

Used world-wide for salvage operations, the Salvage Kit is a proven concept for the temporary and quick repair of damage from groundings or collisions.

The **FlexiShape Miko Plaster**<sup>®</sup> which is included in the kit, is designed to overcome uneven steel surfaces, sharp edges and large areas of damage to the hull.

The Kevlar-reinforced patches are stapled to the hull using the **Underwater Fastener**.

Once the patch is installed the vessel can be towed to safety while retaining oil on the inside and water on the outside.

## DETAILS

### Contents

1 pcs	500 x 1 000 mm FlexiShape Miko Plaster <sup>®</sup>
1 pcs	500 x 2 000 mm FlexiShape Miko Plaster <sup>®</sup>
1 pcs	1 000 x 3 000 mm FlexiShape Miko Plaster <sup>®</sup>
1 pcs	2 000 x 6 000 mm FlexiShape Miko Plaster <sup>®</sup>
1 pcs	6 000 x 8 000 mm FlexiShape Miko Plaster <sup>®</sup>
60 m	Aluminium Profiles
20 pcs	MAM-001 Miko Anchor Magnets
50 pcs	MPM-002 Miko Permanent Magnets
2 pcs	MHT-002 Handling Tool for MPM-002
2 pcs	MikoFix underwater drill system
100 pcs	Self tapping bolts for MikoFix
10 pcs	MHT-001 Handling Ropes

### Gross weight

550 kg (incl. Euro pallet)

## INSTALLATION PRINCIPLE

The FlexiShape Miko Plaster is lowered into the water and positioned over the damaged area by divers. The **MPM-002 Miko Permanent Magnets** are used to hold it in position.

The **MikoFix Underwater Drill System** is used to screw the selftapping bolts through the **Aluminium Bars** to secure the patch in place.

Once the patch is secure and covers all of the damaged area, the water or oil can be pumped out from the inside. The FlexiShape Miko Plaster® is reinforced with several layers of Kevlar –similar to bullet proof vests– to protect it from puncturing. If used correctly it will follow the curvature of the hull without being damaged and will enable the vessel to be re-floated and towed to safety.

A custom-sized patch can be supplied upon request. Miko Plaster® is locally manufactured in Norway and can be delivered on site at short notice.
